**Registration/Cancellation/CE Credits**

Full tuition payment must accompany registration forms. Registrants unable to attend their course can obtain a refund by notifying the host, no later than 14 days prior to the course date. Cancellations past that date may be subject to an additional penalty. Dental CE Solutions is not responsible for any reimbursement due to cancellation of an event. Reimbursement is in the sole responsibility of Dr. Matthew Johnson. Dr. Johnson reserves the right to cancel a course no later than 14 days prior to the course date. Dental CE Solutions is an ADA CERP recognized provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Dental CE Solutions designates this activity for 28 continuing education credits. Continuing Education Credits awarded in the U.S. for participation in the CE activity may not apply towards license renewal in all states. It is the responsibility of each participant to verify the requirements of his/her state licensing .

### **Treatment Planning Short Span, Fixed Implant Restorations for Success**

Short span implant restorations can be challenging as the considerations of fit, occlusion and aesthetics are crucial to the longevity of the restoration. Fixed implant restorations are desirable as patients prefer restorations that mimic the natural dentition.

- To recognize the factors that can influence a short span, fixed implant restoration
- To understand how fit and function need to go hand in hand

### **Anterior Aesthetics: Tissue Training, Immediate Loading vs. Delayed Protocols and Restorative Material Choices**

Aesthetic dentistry is a rapidly changing discipline. As more anterior teeth are being replaced with dental implants, factors such as tissue management, loading and materials need to be considered. Proper diagnosis and treatment planning is essential for success.

- To recognize the diagnostic needs for anterior dental implant therapy.
- To understand the biologic principals of implant mapping and decision making
- To understand which provisional restorations are most appropriate for a given restorative plan.

### **The Transition from Teeth to Dental Implants: Treatment Planning and Treating the Edentulous or soon-to-be Edentulous Patients**

Tooth loss can be devastating as it signifies a change in your patients' oral health. Transitioning the patient from a diseased dentition to a healthy one, can be achieved through diligent treatment planning and a staged approach.

- To understand how to stage the transition from a natural dentition to dental implants
- To recognize patients concerns and how to alleviate them
- To understand the importance of comprehensive treatment planning

### **Occlusion, Delivery Procedures and Management of Complications**

Occlusion is a controversial subject in dentistry on its own, add dental implants into the mix and it becomes quite complicated. Teeth and dental implants differ in many ways. The periodontal ligament is absent around implants, teeth drift and shift with craniofacial change while dental implants remain stationary. Strategies must be in place to accommodate these differences.

- To recognize and understand occlusion as it relates to the dental implant patient
- To learn how to prevent complications related to faulty occlusion
- To learn how to maintain a patient after dental implant therapy is complete
