

## Registration

Please confirm my tuition and attendance to the Implant Education Series being hosted by Drs. Lehman & Menis.

Name: \_\_\_\_\_

Address: \_\_\_\_\_

Email: \_\_\_\_\_

Phone #: \_\_\_\_\_

Type of Payment (MC, Visa, AmEx, Check)

If paying by check, please make it payable to: Anchored in Knowledge

CC#: \_\_\_\_\_

Expiration Date: \_\_\_\_\_

Name as it appears on the card: \_\_\_\_\_

Signature: \_\_\_\_\_

All forms should be completed and returned to your host by April 1, 2019 to secure participation. If you have any questions, please call your host.

### Registration/Cancellation/CE Credits

Full tuition payment must accompany all registration forms. Registrants unable to attend their course can obtain a refund by notifying the host, in writing, no later than 14 days prior to the course date. Dental CE Solutions is not responsible for any reimbursement due to cancellation of an event. Reimbursement is in the sole responsibility of Drs. Lehman & Menis. Drs. Lehman & Menis reserve the right to cancel a course no later than 14 days prior to the course date.

### ADA CERP®

Dental CE Solutions is an ADA CERP recognized provider. ADA CERP is a service of the American Dental Association to assist dental professionals in identifying quality providers of continuing dental education. ADA CERP does not approve or endorse individual courses or instructors, nor does it imply acceptance of credit hours by boards of dentistry. Dental CE Solutions designates this activity for 28 continuing education credits. Continuing Education Credits awarded in the U.S. for participation in the CE activity may not apply towards license renewal in all states. It is the responsibility of each participant to verify the requirements of his/her state licensing board.

TECHNIQUES AND  
PRACTICES

Friday, May 31, 2019

### Anterior Aesthetics: Tissue Training, Immediate Loading vs. Delayed Protocols and Restorative Material Choices

Aesthetic dentistry is a rapidly changing discipline. As more anterior teeth are being replaced with dental implants, factors such as tissue management, loading and materials need to be considered. Proper diagnosis and treatment planning is essential for success. At the end of the program, the participant should be able to:

- To recognize the diagnostic needs for anterior dental implant therapy.
- To understand the biologic principals of implant mapping and decision making
- To understand which provisional restorations are most appropriate for a given restorative plan

Friday, August 9, 2019

### Treatment of the Edentulous Arch

Many options are available to the clinician to provide full arch dental implant therapy to patients with a failing dentition. Some patients are candidates for full arch, immediate, provisional restorations while others are more appropriately treated with a staged approach.

At the end of the program, the participant should be able to:

- Learn how to treatment plan a patient with a failing dentition by determining the best course of treatment
- Understand techniques and materials used for the fabrication of provisional restorations
- Decide which restorative materials should be used in the final restorations
- How to maintain final restorations

Friday, November 8, 2019

### The Single Unit Implant vs. the 3 Unit Bridge & Cement vs. Screw Retained

As clinicians, you need to educate your patients on the benefit of a single implant vs a bridge. The decision to cement or screw retain a crown, is one you make as long as the patient has no preference. By making an informed decision, treatment planning these cases can be accomplished and the desired outcome can be achieved.

At the end of the program, the participant should be able to:

- Describe the biologic principles that drive optimal results in the aesthetic zone
- Recognize and understand the long term effect of decisions regarding implants vs. conventional dentistry

Friday, February 7, 2020

### Occlusion, Delivery Procedures and Management of Complications

Occlusion is a controversial subject in dentistry on its own, add dental implants into the mix and it becomes quite complicated. Teeth and dental implants differ in many ways. The periodontal ligament is absent around implants, teeth drift and shift with craniofacial change while dental implants remain stationary. Strategies must be in place to accommodate these differences. At the end of the program, the participant should be able to:

- To recognize and understand occlusion as it relates to the dental implant patient
- To learn how to prevent complications related to faulty occlusion
- To learn how to maintain a patient after dental implant therapy is complete

Paulino Castellon, DDS

Dr. Castellon received his dental degree from the University of Guadalajara, Guadalajara, Mexico, and attained his Certificate in Prosthodontics at the Louisiana State University School of Dentistry where he also completed a Fellowship in Aesthetic and Implant Dentistry. He is *Gratis* Associate Professor at the Department of Prosthodontics at LSUSD. He has authored several publications with a focus on implant dentistry and maintains a private practice limited to Prosthodontics in Dallas, Texas. Dr. Castellon has a financial relationship with Dental CE Solutions for speaking engagements.

#### LOCATION:

FRANCESCA'S FAMIGLIA  
100 E STATION ST  
BARRINGTON, IL 60010

#### PROGRAM TIME:

8am-4pm

#### TUITION: \$2250

28 CE

This continuing education activity has been planned and implemented in accordance with the standards of the ADA Continuing Education Recognition Program (ADA CERP) through joint efforts between Dental CE Solutions and Lehman & Menis.
