Socket Preservation - Necessary or Not?

This lunch and learn is designed to support dentists, in conjunction with their dental team, in their decision-making process when treatment planning dental extractions and implants for their patients.

Implant dentistry has grown over the years and there have been many advances. My goal is to simplify the process of treatment planning by focusing on our patients. When the best interests of the patient are put at the forefront of our treatment planning, everybody wins.

After today's talk, I hope that you will learn a couple of pearls that you will all be able to take with you to educate each other, your patients, your family and your friends.

Learning Objectives

At a minimum you should be able to educate patients and answer questions that they may have regarding the implant process on the following:

1. What socket preservation is.
2. When socket preservation is indicated.
3. Learn the different types of oral bone grafting techniques.

Monday, May 12th, 2025

12:00 -2:00 p.m.

Springs Dentistry

**6665 Delmonico Dr Suite C,
Colorado Springs, CO**

Complimentary fee

**Dr. Matthew D'Addario,
DDS, MD**

Canadian born and raised, Dr. Matthew D.

D'Addario grew up in Niagara Falls and obtained his undergraduate degree from the University of Toronto. He obtained his dental degree from Case School of Dental Medicine in Cleveland, Ohio, and his medical degree from the University of Kentucky. Dr. D'Addario chose to pursue advanced and specialized training for an additional 6 years after dental school in oral and maxillofacial surgery. This advanced training makes him the dental surgical expert in wisdom tooth removal, dental implant placement and related bone grafting procedures, orthodontic surgical procedures, and office-based sedation. He is board certified by the American Board of Oral and Maxillofacial Surgery.
